# ULTRA-SMALL PACKAGE PWM/PFM SWITCHING CONTROL
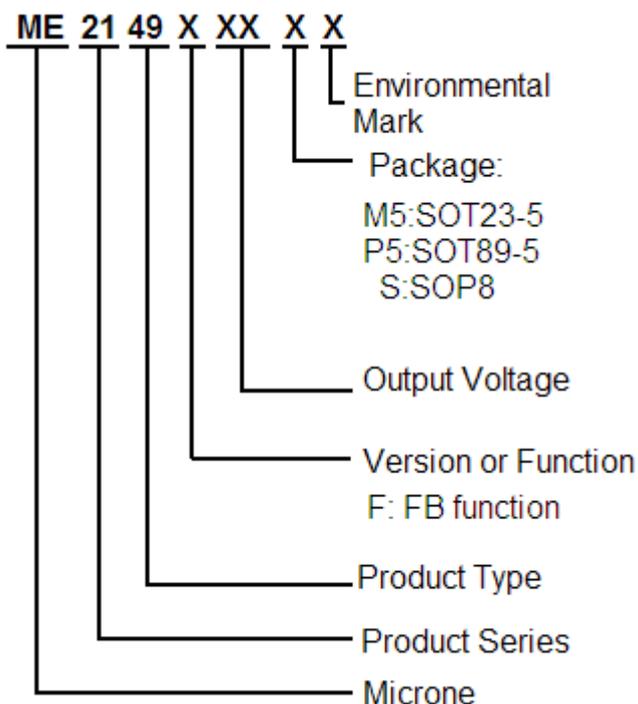

# STEP-UP SWITCHING REGULATOR

## Description

The ME2149 series is a CMOS step-up switching regulator which mainly consists of a reference voltage source, an oscillation circuit, an error amplifier, a phase compensation circuit, a PWM/PFM switching control circuit. With an internal low-ON-resistance Nch Power MOS, this product is applicable to applications requiring high efficiency and high output current. The ME2149 series switches its operation to the PFM control circuit whose duty ratio is 15 % with to the PWM/PFM switching control circuit under a light load and to prevent decline in the efficiency by IC operation current.

## Feature

- Low voltage operation: Start-up is guaranteed from 0.9 V($I_{OUT}$ =1 mA )

- Duty ratio: Built-in PWM/PFM switching control circuit 15 to 78 % .

- oscillator frequency：1.0MHz

- Output voltage range: 1.5V ~6.5 V

- Output voltage accuracy：±2%

- Soft start function: 2 mS.

- PACKAGE：SOT23-5,SOT89-5,SOP8

## Selection Guide

ME 21 49 X XX X X

- Environmental Mark
- Package:
  M5:SOT23-5
  P5:SOT89-5
  S:SOP8
- Output Voltage
- Version or Function
  F: FB function
- Product Type
- Product Series
- Microne

## Typical Application

- MP3 players, digital audio players

- Digital cameras, GPS, wireless transceiver
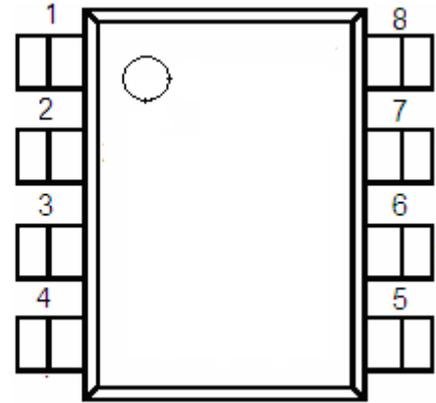

- Portable devices

## Pin Configuration

| TYPE | POSFIX | PACKAGE | SWICHING TRANSISTOR | CE FUNCTION | VDD FUNCTION | FB FUNCTION | FEATURE |

## Pin information

### ME2149F

| Pin Number | | | Pin Name | Function |
|------------|------------|------|----------|----------|
| SOT23-5 | SOT89-5 | SOP8 | | |
| 1 | 3 | 3 | CE | Shutdown pin |
| 2 | 2 | 7,8 | LX | External transistor connection pin |
| 3 | 1 | 2 | GND | GND pin |
| 4 | 5 | 5,6 | VDD | IC power supply pin |
| 5 | 4 | 4 | FB | Feed Back voltage pin |

## Block Diagram

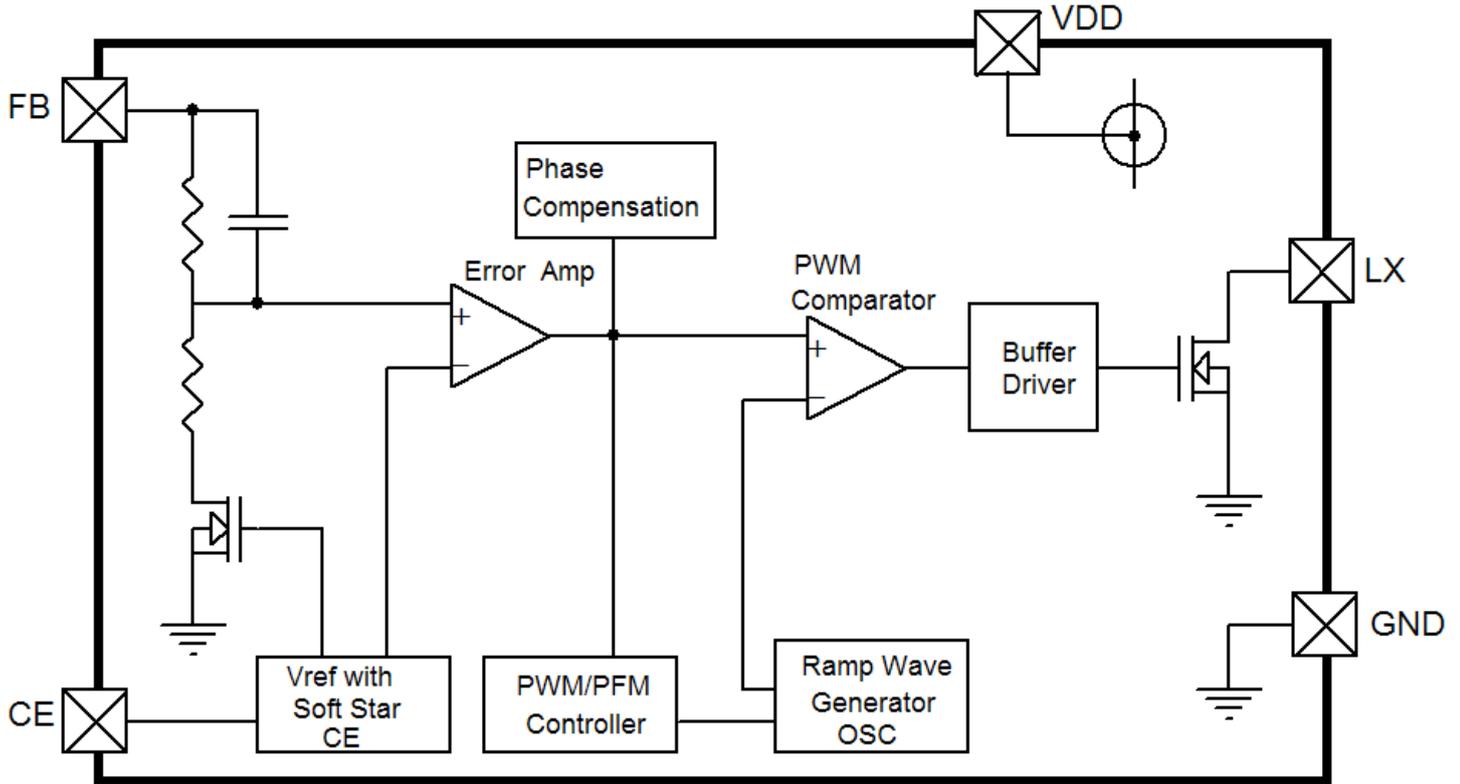

## Absolute Maximum Rang

| PARAMETER | SYMBOL | RATING | | UNIT |
|---|---|---|---|---|
| VDD Pin Voltage | VDD | $-0.3\sim6.5$ | | V |
| LX Pin Voltage | LX | $-0.3\sim20$ | | V |
| CE Pin Voltage | $V_{CE}$ | $-0.3\sim Vin+0.3$ | | V |
| LX Pin Current | $I_{LX}$ | $\pm4000$ | | mA |
| Power Dissipation | Pd | SOT23-5 | 300 | mW |
| | | SOT89-5 | 500 | |
| | | SOP8 | 800 | |
| Operating Temperature Range | $T_{Opr}$ | $-25\sim+85$ | | ℃ |
| Storage Temperature Range | $T_{stg}$ | $-40\sim+125$ | | ℃ |

## Electrical Characteristics
### ME2149F

Measuring conditions：VDD=$V_{CE}$=3.3V，Topt=25℃。Unless otherwise specified。

| Parameter | SYMBOL | CONDITION | | MIN | TYP | MAX | UNIT | Circuit |
|---|---|---|---|---|---|---|---|---|
| Feedback voltage | $V_{FB}$ | - | | 1.225 | 1.25 | 1.275 | V | 2 |
| Input voltage | $V_{IN}$ | - | | - | - | 6 | V | 2 |
| Operation start voltage | $V_{ST1}$ | $I_{OUT}$=1mA | | - | - | 0.9 | V | 2 |
| Oscillation start voltage | $V_{ST2}$ | No external parts, voltage applied to $V_{OUT}$ | | - | - | 0.7 | V | 1 |

| Current consumption 1 | $I_{SS1}$ | $V_{FB}$=$V_{FB}$(S)× 0.95 | | - | 4.0 | - | mA | 1 |
| Current consumption 2 | $I_{SS2}$ | $V_{FB}$=1.5V | | - | 25 | - | µA | 1 |
| Current consumption during shutdown | $I_{SSS}$ | $V_{CE}$=0V | | - | 0.02 | 0.5 | µA | 1 |
| Feedback voltage temperature coefficient | | Ta=-25-85℃ | | - | ±50 | - | ppm/℃ | 2 |
| Oscillation frequency | Fosc | - | | 0.8 | 1.0 | 1.2 | MHz | 1 |
| Max. duty ratio | MAXDUTY | $V_{FB}$=$V_{FB}$(S)× 0.95 | | - | 78 | - | ％ | 1 |
| PWM/PFM switchingduty ratio | PFMDUTY | $V_{FB}$=$V_{FB}$(S)× 1.5, no load | | - | 15 | - | ％ | 1 |
| Shutdown pin input voltage | $V_{SH}$ | Measured the oscillation at LX pin | | 0.75 | - | - | V | 1 |
| | $V_{SL1}$ | Judged the stop of oscillation at LX pin | $V_{OUT}$≥1.5V | - | - | 0.3 | V | 1 |
| | $V_{SL2}$ | | $V_{OUT}$<1.5V | - | - | 0.2 | V | 1 |
| Shutdown pin input voltage | $I_{SH}$ | $V_{CE}$=$V_{FB}$(S)×0.95 | | -0.1 | - | 0.1 | µA | 1 |
| | $I_{SL}$ | $V_{CE}$=0V | | -0.1 | - | 0.1 | µA | 1 |
| Soft start time | tss | - | | - | 2 | - | mS | 2 |
| Efficiency | EFFI | - | | - | 90 | - | ％ | 2 |

Note:

1. $V_{OUT}$(S) is the set output voltage value, and $V_{OUT}$ is the typical value of the output voltage.

2. $V_{OUT}$(S) can be set by using the rate of $V_{FB}$ and output voltage setting resistors (R1, R2).

3. $V_{FB}$(S) is the set output voltage value.

4. VDD/$V_{OUT}$ separate type:

   1.8V≦VDD<6V is recommended to stabilize the output voltage and oscillation frequency.

**Test Circuit**

    **1.**

  **2.**

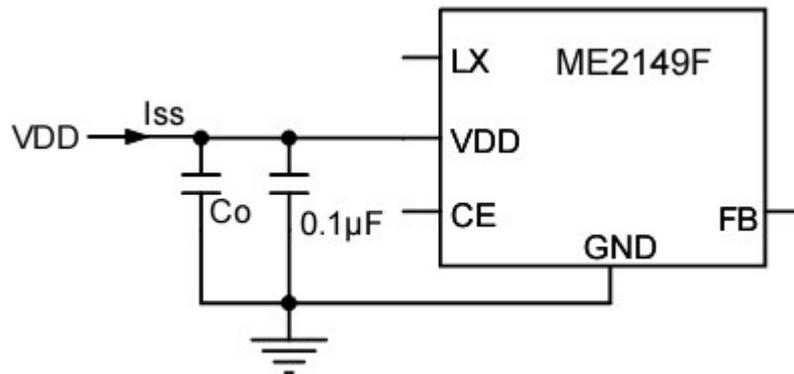

**External parts（suggest）**

1、Diode use Schottky diode such as SS14 or SS34 (forward voltage drop:0.2V)

2、Inductor：3.3μH（r<30mΩ）

3、Capacitor：ceramic capacitor 22μF（It is best to use two parallel connection ceramic capacitors）

4、Feed back resistors:R1+R2<50KΩ

# External parts selection for DC/DC converter

The relationship between major characteristics of the step-up circuit and characteristics parameters of the external parts are shown in Figure 1.

| For larger output current? | For high efficiency? | | For smaller ripple voltage? |
|---|---|---|---|
| | Operation efficiency | Stand-by efficiency | |
| Smaller inductance | | Larger inductance | |
| Smaller DC resistance of inductor | | | |
| Large output capacitance | | Large output capacitance | |

Figure 1 Relationship between major characteristics of the step-up circuit and external parts

## 1. Inductor

An inductance has strong influence on maximum output current $I_{OUT}$ and efficiency η.1.

Figure 2 shows the relation between $I_{OUT}$, and η characteristics to L of ME2149.

Figure 2　L—$I_{OUT}$ and η characteristics

The peak current ($I_{PK}$) increases by decreasing L and the stability of a circuit improves and $I_{OUT}$ increases. If L is furthermore made small, efficiency falls and in running short, $I_{OUT}$ decreases. ( Based on the current drive capability of external switching transistor.)

The loss of $I_{PK}$ by the switching transistor decreases by increasing L and the efficiency becomes maximum at a certain L value. Further increasing L decreases efficiency due to the loss of DC resistance of the coil. Also, $I_{OUT}$ decreases, too.

Oscillation frequency is higher, smaller one can be chose and also makes coil smaller. The recommended inductances are 2.2 to 4.7 µH inductor for ME2149.

Choose a value for L by referring to the reference data because the maximum output current is due to the input voltage in an actual case. Choose an inductor so that $I_{PK}$ does not exceed the allowable current. Exceeding the allowable current of the inductor causes magnetic saturation, remarkable low efficiency and destruction of the IC chip due to a large current.

$I_{PK}$ in uncontinuous mode is calculated from the following equation:

$$I_{PK} = \sqrt{\frac{2I_{OUT}(V_{OUT} + V_D - V_{IN})}{f_{OSC}.L}}(A)$$

Fosc = oscillation frequency, $V_{DD}$ =0.4 V.

## 2. Diode

Use an external diode that meets the following requirements:

• Low forward voltage: ($V_F$<0.3 V)

• High switching speed: (50 ns max.)

• Reverse voltage: $V_{OUT}$ + $V_F$ or more

• Rated current: $I_{PK}$ or more

## 3. Capacitor ($C_{IN}$, $C_O$)

To improve efficiency, an input capacitor ($C_{IN}$) lowers the power supply impedance and averages the input current. Select $C_{IN}$ according to the impedance of the power supply used. The recommended capacitance is 10μF for the ME2149.

An output capacitor ($C_{OUT}$), which is used to smooth the output voltage, requires a capacitance larger than that of the step-down type because the current is intermittently supplied from the input to the output side in the step-up type. A 22μF ceramic capacitor is recommended for the ME2149 . However, a higher capacitance is recommended if the output voltage is high or the load current is large. If the output voltage or load current is low, about 10μF can be used without problems.

Select $C_{OUT}$ after sufficient evaluation with actual application.

A ceramic capacitor can be used for both the input and output.

## 4. Precautions

● Mount external capacitors, a diode, and a coil as close as possible to the IC.

● Unique ripple voltage and spike noise occur in switching regulators. Because they largely depend on the coil and the capacitor used, check them using an actually mounted model.

●Make sure dissipation of the switching transistor (especially at a high temperature) does not exceed the allowable power dissipation of the package.

●The performance of this IC varies depending on the design of the PCB patterns, peripheral circuits and external

parts. Thoroughly test all settings with your device. Also, try to use recommended external parts.

## Typical Application Circuit

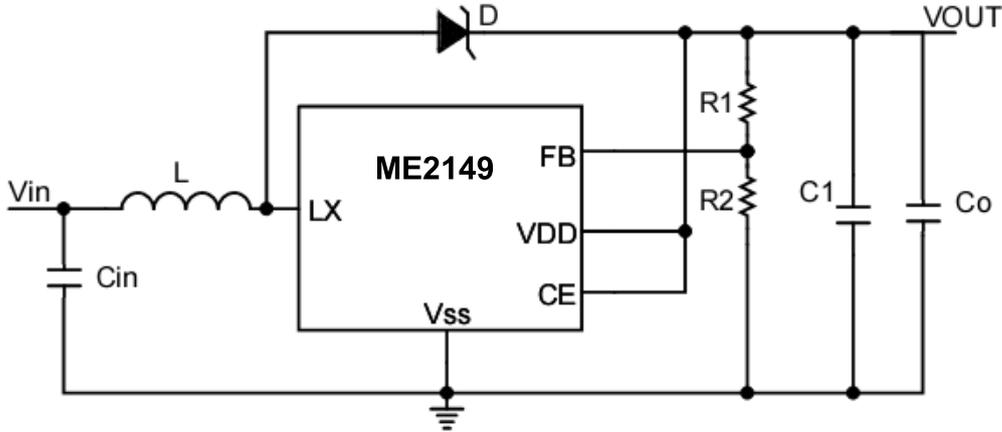

For FB and external 1

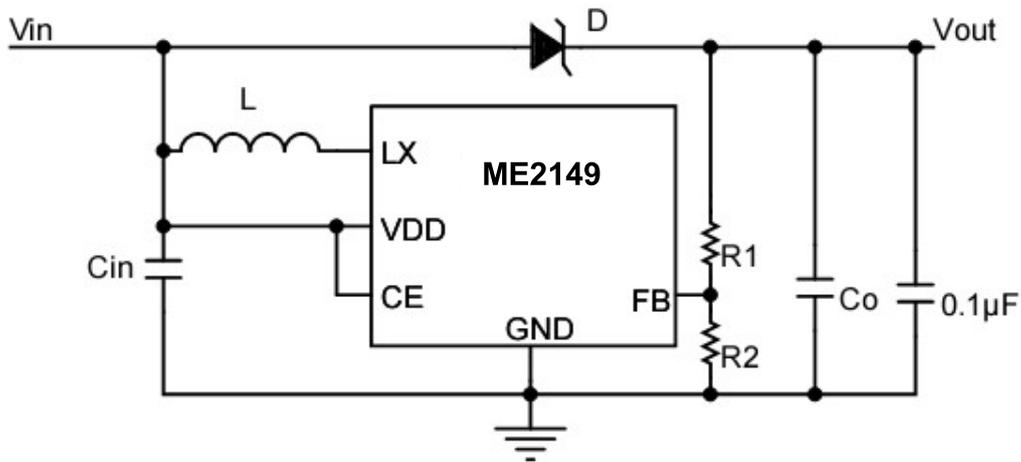

For FB and external 2

**Note:**

**1. If VDD connected to Vin , Vin should above 2.5V.**

**2. ME2149F has three packages, suggestion: SOT23-5 loading is not more than 1A; SOT89-5 is not more than 1.5A; SOP8 is not more than 2A.**
